inpO2

inpO2: Imposition Solution For Adobe© Acrobat©

inpO2 integrates powerful imposition technology within a familiar environment: Adobe® Acrobat®. This family of products offers all the key elements today's print professional look for. Editions and modules are available to create the solution that's right for you. From the simple wizard-driven approach to high-end planning, inpO2 has everything you need to meet all your imposition needs.

HIGHLIGHTS

1. Scalable Product Family.
Start with the powerful, yet cost effective inpO2 Basic for basic sheetfed or digital printing applications or move up to inpO2 Pro for more complex imposition planning or assmebly for sheetfed and web press work.

2. Familiar Environment of Acrobat.
Get up and running quickly as inpO2 is built right into Adobe Acrobat 8, 9 or X Pro, a standard in today's production.

3. Add Modules for Your Printing Needs.
Add advanced functionality modules hot folder Automation, gang work Optimization, or JDF Connectivity. Each can be added to inpO2 Basic or Pro to customize your imposition solution.

Key Features
Product

inpO2 Basic
- Quickly build standard impositions for sheet-fed, and ditial layouts in the inpO2 Wizard.
- Support for saddle stich, perfect bound, step & repeat, N-up, custom flatwork, and cut & stack.
- Add in custom marks such as color bars, side guides and bar codes.
- Customize the results on the inpO2 light table.
- Create totally custom layouts, or custom foldings for use in the Wizard.
inpO2 Pro
- Includes everything from inpO2 Basic.
- Use the advanced Assembly Manager to quickly build complex sheetfed and web layouts from your imposition templates.
- Scale or rotate documents and pages.
- Use the layout manager to plan future jobs and save layouts for production.
- Create mark sets for different job types.
- Network licensing available.

inpO2 Wizard allows you to slelect your imposition layout, set gutters, bleeds and offsets.

inpO2 Assembly Manager allows you to build assmebly trees from your templates to create complex layouts quickly and with precision.

inp02 ADVANCED MODULES:

Optimization Module

• Simply import your jobs, enter quantities for each, and define your press run.
• Automatically gang as many jobs as needed on just about any press sheet size.
• Override the automated results by defining constraints, reordering products or modifying the press run.
• Take control on the inp02 Light Table and use special tools to modify the automated results.
• Constant feedback shows updated quantities and press sheet waste as the layout changes.

Ganging of jobs with inp02 Optimization Module.

Automation Module

• Drag and drop PDF files into a pre-defined hot folder to automatically impose your most common layouts.
• Use the Wizard interface to set-up any automated workflow independent of page size or page count. inp02 automatically adjusts the trim size and run length to match the incoming job specifications.
• Integrate inp02 into an existing managed workflow environment using the Hot folders to capture new jobs and direct completed layouts to the next workflow phase.
• Integrate with Enfocus Switch with hot folders or use the inp02 Automation Configurator.

inp02 Automation Manager allows you to create multiple work-flows. Each with their own input folder, impositon settings and output destination.

JDF Export Module

• Control over JDF data type and version.
• Export with cutting parameters for downstream finishing.
• Define output settings to integrate with your workflow.
